

A Leader in Many Ways

As part of their commitment to reducing environmental impact associated with building construction and maintenance, pharmaceutical giant, Pfizer, Inc. has embraced the LEED® (Leadership in Energy and Environmental Design) certification process.

Pfizer recently completed a LEED Gold project in South San Francisco. This marked the first laboratory facility to be registered in the LEED-CI pilot program — the rating system for commercial interiors. EduTracks worked collaboratively with the project’s architects, builders and engineers to develop an education program as part of the LEED certification process. The LEED display and a case study report provided one point for an education program under the LEED-CI “Innovation and Accredited Professional” category.

The LEED-CI display, currently located in the Pfizer building lobby, provides a means for occupants and visitors to become familiar with the environmental aspects of the facility. Filled with information about the LEED-CI Rating System, sustainable building practices and building materials, the display showcases how each of the LEED-CI categories is implemented in this laboratory facility.

It was great working with EduTracks. This collaborative team effort resulted in a really effective education kiosk and a satisfied client.
